
**Aligning LLMs to New Zealand Public Values
Information for Anonymous Survey Respondents**

Hello

My name is James Thompson and I am a Masters student in Artificial Intelligence at Te Herenga Waka—Victoria University of Wellington. This research project is work towards my Masters degree.

He aha te whāinga mō tēnei rangahau / What is the aim of the project?

Large Language Models (LLMs)—the technology behind tools like ChatGPT—are increasingly making decisions that affect people's lives. However, the values these models follow are typically set by private companies rather than the public. This project aims to develop and test a method for tuning LLMs to behave in ways that better reflect New Zealanders' values.

Your participation will help us understand whether the public prefers the behaviour of LLMs that have been aligned to public values compared to unaligned models.

This research has been approved by the Te Herenga Waka—Victoria University of Wellington Human Ethics Committee [Hōkai application reference number to be added].

Ka pēhea tō āwhina mai / How can you help?

You have been invited to participate because you are a member of the New Zealand public. If you agree to take part, you will complete an anonymous online survey. The survey will present you with short scenarios describing how an AI system behaved in a particular situation. For each scenario, you will be asked to rate how much you agree with the AI's behaviour on a simple scale. You will also be asked a few questions about your own values. The survey will take approximately 15 minutes to complete.

After completing the survey, you may optionally enter a separate prize draw for one of two \$50 Prezzy Cards. If you enter the draw, you will provide an email address in a separate form. This email address will not be linked to your survey responses or used for any other purpose. The two winners will be selected at random after the survey closes and contacted by email.

Ka ahatia ngā kōrero ka tukuna mai / What will happen to the information you give?

This research is anonymous. This means that nobody, including the researchers, will be aware of your identity. By answering the survey, you are giving consent for us to use your responses in this research. Your answers will remain completely anonymous and unidentifiable. Once you submit the survey, it will be impossible to retract your answer. Please do not include any personal identifiable information in your responses.

To support future research and be transparent with our findings the final survey data will be made publicly available in an anonymised form. This means that the data will be stripped of any information that could identify you, and will be shared with other researchers and the public. It will be released under a Creative Commons license, which allows others to use and share the data for research purposes.

A summary of research findings as well as an academic write up will be made available on the project website [website link to be added] once the research is complete.

Mehemea ngā pātai, he raruraru rānei, me whakapā ki a wai / If you have any questions or problems, who can you contact?

If you have any questions, either now or in the future, please feel free to contact a member of the research team or visit the project website for more information [website link to be added].
